Subject ATA-inspection and laboratory tests for Kiwa-certificate K41985 for 2010
Enclosures 2
Information H.F. Wegh, +31 70 414 44 63
E-mail frank.wegh@kiwa.nl
Date 16 August 2011
Our reference DWA/2011-08-16/sdr

Dear Mr. Amacher,

On 3 May 2010 in Subingen and 5 May 2010 in Schaffhausen Mr. Grundmann inspected your product 'PE 100'. This inspection was carried out within the framework of the above mentioned Kiwa-certificate and was focussed on the ATA (Assessment on Toxicological Aspects) part of this certificate. During the inspection a sample was taken and tested in our laboratory. This letter reports the results of the inspection and the laboratory tests (enclosure).

Inspection

The Kiwa inspector performed the inspection at the production site and the results are registered in the 'ATA Inspection Report' (AIR). The completed AIR was signed by the inspector as well as by the contact of your company. A copy of this signed AIR was left behind.

Sampling

On request of the Kiwa inspector the samples were taken by an employee of your company. In addition it has been explicitly inquired if the material is released after a quality control. The sample has been sent, protected from dust and moisture, to the laboratory, together with a copy of the completed and signed AIR. The date the samples arrived at the laboratory is mentioned in the enclosed test report with reference C-10 1570 dated 30 December 2010 and C-10 1572 dated 17 December 2010.

Laboratory test

The laboratory tests were executed in accordance with the parameters mentioned in the certificate and/or the appendix with the certification agreement (Maximum Tolerable Concentration in drinking water (MTC_{drinking water})). If applicable, tests on the aspects of odour, flavour, colour and turbidity, and a comparative pyrolysis test have been performed. The results of the laboratory tests and the pyro-index are reported in the enclosed test report.

Inspection results

The results of the inspection do not give cause for comments.

Laboratory results

The results of the laboratory tests do not give cause for comments.

We hope we have informed you sufficiently.

Kind Regards,
Kiwa Nederland B.V.

H.F. Wegh
Certification Engineer
Product group Kiwa-ATA

c.c. Mr. Grundmann (Inspector Kiwa GmbH)

Date December 30, 2010
Our reference C-10 1570

Dear Ms. De Ridder,

Please find enclosed our test report concerning the organoleptic aspects of a PE 100 electrofusion drinking water coupler from the manufacturer Georg Fischer Wavin AG belonging to the Kiwa certificate K41985/01. The receiving code of the electrofusion coupler is C-10 1570.

Results migration test

The test results are given at the next pages. These results relate only to the samples tested. The report shall not be reproduced except in full and with the written approval of KWR Water B.V.

Result of the pyrolysis-GC/FID

The pyro-index obtained from the samples in relation to the samples of 2009 is 0.9912.

Hoping to have been of service.

Kind regards,
KWR Watercycle Research Institute

July – September 2010

1. Information concerning the tested product

Trade name	: PE 100 electrofusion coupler Straight connector (internal diameter 75 mm)
Base material	: Eltex TUB 121 from Ineos
Manufacturer	: Georg Fischer Wavin AG
Proposed use of the product	: Drinking water distribution
Sample from	: Georg Fischer Wavin AG
Production place	: Schaffhausen (Switzerland)
Production date	: May 03, 2010
Lot/Batch number	: E 1039205
Sampling date	: May 05, 2010
Date of receipt of the samples	: June 02, 2010
Materials code	: +GF+ d 75 5#10 PE100 SDR 11

2. Results of the testing

The conditions of the performed migration test, the (raw) data of the migration water and information concerning the applied methods of analysis are laid down and in accordance with several relevant European standards detailed described in annex 1 of this test report.

The test conditions and final results of all tests are (summarized and) presented in table 1.
